

Simplify voter verification with Diebold's compact and cost-effective electronic poll book.

Expedites voter verification process with its intuitive operation

Integrates the voter registration system, polling location, and voting technology

Virtually eliminates costs associated with printing paper poll books and updating voter history files

Reduces provisional voting and calls to election central

Convenient hand-held operation

The Diebold Election Systems ExpressPoll-2000 provides a cost-effective, streamlined solution that automates the voter verification process at each polling location. ExpressPoll-2000 supplies immediate voter verification, as a database of registered voters for the respective precinct, district or the entire jurisdiction can be stored within the unit. It seamlessly unifies the functionality of the voter registration system, polling locations, and voting technology.

Polling Place Efficiency

ExpressPoll-2000 can eliminate the task of creating and utilizing burdensome paper based poll books. A data memory card is used within ExpressPoll to store voter information for all voters within the entire jurisdiction. The process of verifying a voter is an extremely easy operation completed within seconds. Voter identity is accomplished by inputting the voter's last name, first name, middle ini-

tial, address, voter ID number, date of birth, and/or drivers license number onto the touch screen. Any one or a combination of these elements can be used to identify the voter at the precinct.

Ease of Use

ExpressPoll enables a poll worker to verify a registered

voter's respective ballot style, and other important characteristics as needed, including a provisional voter designation, voice guidance activation, and ballot magnification. ExpressPoll is designed to be used seamlessly with Diebold's DIMs-Net voter registration software solution and can also be used with other election system technology as a means to verify voter eligibility.

Cost Effective

ExpressPoll retains voter history information, so at the conclusion of the election, voter history data can be automatically transferred to the jurisdiction's voter registration system. This capability greatly reduces the costs associated with weeks of post election voter name logging, which occur after each and every election.

ExpressPoll enables a poll worker to verify a registered voter and automatically program the respective voter's Voter Access Card for use with the Diebold AccuVote-TSX and AccuVote-TS touch screen voting stations.

Reduces Provisional Voting

If a voter arrives at the wrong precinct, a jurisdiction-wide voter database can be stored on ExpressPoll so a polling place official can quickly provide the voter with the correct voting location. ExpressPoll can display a map of the correct polling location for the voter, which can assist the voter in finding the correct location. This capability significantly reduces poll worker calls into the election central office during the election to clarify precinct location for a voter. It can also reduce provisional voting, as the respective voter's precinct can be immediately identified.

Convenient

The portable ExpressPoll-2000 can be hand-carried by a poll worker through a line of waiting voters to expedite the verification process. An integral battery supply provides three hours of backup power should the primary AC power source be interrupted. Further convenience is provided by ExpressPoll's touch screen which allows for easy operation by poll workers of all ages. Its efficiency and intuitiveness lead to a smooth Election Day for both poll workers and voters alike.

ExpressPoll can reduce provisional voting by identifying the correct voting location and displaying a map to the voter.
